TaskKamao

"Task karo, coins kamao"

Setup Guide — Step by Step (Hinglish)

Accounts banana • Firebase • AdMob • RazorpayX • App build • Play Store

Bhagraj ke liye — Jaipur • Yeh guide khud follow karein ya apne developer ko dein.
Version 1.0 • Console menus kabhi-kabhi badalte rehte hain; naam thoda alag dikhe to wahi milta-julta option chunein.

0. Shuru karne se pehle — 5 zaroori baatein (dhyan se padhein)

1. Kamai ki koi guarantee nahi. Users ko jo paise milte hain woh aapki ad/offerwall kamai se aate hain. Agar ad revenue kam hai aur payout zyada, to nuksaan aapka hai. App mein ya Play Store par "roz ₹500 kamao", "ghar baithe income", "sote-sote kamao" jaisi baatein **kabhi na likhein** — Google Play misleading claims par app hata deta hai.

2. "Add Money" / deposit nahi hai — aur add bhi mat karna. Users se paisa lekar rakhne ke liye RBI ka PPI license chahiye. Yeh app sirf kamaye hue rewards UPI par bhejta hai.

3. Video ads ke coins withdraw nahi hote (by default). Google AdMob ki policy ("Policies for ad units that offer rewards") ke hisaab se rewarded video ke badle aisa reward nahi de sakte jo cash mein badla ja sake. Isliye code mein video dekhne par **"video points"** milte hain (sirf leaderboard ke liye). Withdraw hone wale coins quiz, check-in, spin, scratch, offers aur referral se aate hain. Ise badalne ki koshish na karein, warna AdMob account band ho sakta hai.

4. Legal/CA salah lein. Rewards par TDS/GST, spin/scratch jaise chance-based features, aur India ke online gaming niyam — launch se pehle ek CA/lawyer se baat zaroor karein. Spin aur scratch ko admin panel se kabhi bhi band kar sakte hain (Tasks > active = false).

5. Kharcha pehle se socho. Default mein daily check-in 50 coins (₹0.50) hai. 1,000 users roz check-in karein to sirf check-in ka kharcha ₹500/din = ₹15,000/mahina. Shuruaat mein admin panel > Config mein `checkinCoins` kam (jaise 5–10) rakhna samajhdari hai, jab tak asli kamai ka andaza na lage.

1. Kaun-kaun se accounts banane hain

Account	Kis liye	Kharcha / Note
Google account (Gmail)	Sab cheezon ka login	Free. Ek alag business Gmail banana behtar.
Firebase (console.firebase.google.com)	Login (OTP), database, server code	Spark plan free hai, lekin **Cloud Functions ke liye Blaze (pay-as-you-go) plan zaroori** — card/UPI autopay lagana padega. Chhote use par bill aksar kam aata hai; budget alert zaroor lagayein.
Google AdMob (admob.google.com)	Ads se kamai	Free. Payment ke liye PAN/bank details. Kamai ki guarantee nahi.
RazorpayX (x.razorpay.com)	Users ko UPI payout	Business account + KYC. Aam taur par **registered business** (proprietorship/company), business PAN, kai cases mein GST, bank details maange jaate hain. Current account mein minimum balance aur har payout par fees (published pricing: UPI ₹1,000 se kam par ₹4 + GST — sign-up ke time current rate check karein).
Alternative: Cashfree Payouts (cashfree.com)	RazorpayX na mile to	Ise bhi business KYC chahiye. Code mein sirf `functions/src/payouts.ts` badalni hogi (developer kar dega).
Google Play Console (play.google.com/console)	App publish karna	**$25 ek baar** (~₹2,100–2,200). Identity verification. Naye **personal** developer accounts ko production se pehle closed testing karni padti hai (abhi ki rule: kam se kam 12 testers, 14 din lagatar — Play Console mein current number check karein). Organization account (D-U-N-S number) par yeh rule alag hai.
Website / Privacy page	Privacy Policy, Terms, account delete page	Firebase Hosting free hai. Domain chahiye to ~₹500–1,000/saal.

2. Apne PC (Windows) par tools install karna

Developer ko de rahe ho to yeh section unka hai. Khud kar rahe ho to ek-ek karke karein:

1. **Git**: git-scm.com > Download for Windows > install (sab default).
2. **Node.js 20 LTS**: nodejs.org > "20.x LTS" installer > install. Check: CMD kholkar `node -v` (v20.x dikhna chahiye).
3. **Android Studio**: developer.android.com/studio > Download > install. Pehli baar kholne par "Standard" setup chunein (Android SDK, emulator aa jayega).
   Android Studio > More Actions > SDK Manager > **SDK Platforms**: Android 15 (API 35) tick > **SDK Tools**: "Android SDK Command-line Tools" tick > Apply.
4. **Flutter SDK**: docs.flutter.dev > Get started > Install > Windows > Android > zip download karein (stable, 3.24 ya naya).
   Zip ko `C:\src\flutter` mein extract karein (Program Files mein nahi).

Start > "Edit the system environment variables" > Environment Variables > User variables > **Path** > Edit > New > `C:\src\flutter\bin` > OK.

5. Naya CMD kholein aur chalayein:

```
flutter doctor
flutter doctor --android-licenses     (sab mein "y" dabayein)
```

   Jab tak "Flutter" aur "Android toolchain" ke aage ✓ na aaye, jo bataya jaye woh fix karein.

6. **Firebase CLI**:

```
npm install -g firebase-tools
firebase login
```

7. Project zip (`TaskKamao_source.zip`) ko `C:\projects\taskkamao` mein extract karein. Aage ke saare commands isi folder se.

3. Firebase project banana (exact click path)

3.1 Project

> console.firebase.google.com > **Create a project** (ya "Add project") > Name: **TaskKamao** > Continue > Google Analytics (on rakh sakte hain) > Create project.

Project ID note karein (jaise `taskkamao-1a2b3`). File `.firebaserc` kholkar `YOUR-FIREBASE-PROJECT-ID` ki jagah yeh ID likhein.

3.2 Blaze plan + budget alert

> Console mein neeche-left plan ka naam (**Spark**) > **Upgrade** > Blaze > billing account banayein/chunein (card) > budget amount set karein (jaise ₹1,000) > Purchase.

Alag se: console.cloud.google.com > Billing > **Budgets & alerts** > Create budget > ₹1,000 > alerts 50%/90%/100% par email.

3.3 Login (Phone OTP) chalu karna

> Build (left menu) > **Authentication** > Get started > **Sign-in method** > **Phone** > Enable > Save.

> Isi page par **Email/Password** > Enable > Save (yeh sirf admin panel login ke liye hai).

> Authentication > **Settings** > **SMS region policy** > Allow > sirf **India** chunein > Save. (SMS fraud se bachata hai.)

> Testing ke liye: Sign-in method > Phone > **Phone numbers for testing** > ek number + 6 digit code daalein (jaise +91 99999 00001 / 123456). Play Store review team ko bhi yahi dena hai.

3.4 Database (Firestore)

> Build > **Firestore Database** > Create database > Location: **asia-south1 (Mumbai)** > **Start in production mode** > Create.

Location baad mein badal nahi sakte. Code bhi Mumbai region (asia-south1) maan kar likha hai.

3.5 Android app jodna + google-services.json

1. Pehle SHA-1 nikalein (PC par, project folder mein):

   ```
   cd app
   flutter pub get
   cd android
   gradlew signingReport
   ```

   Output mein "Variant: debug" ke neeche **SHA1** aur **SHA-256** copy karein.
   Yeh command na chale to debug key seedha keytool se dekh sakte hain:

   ```
   keytool -list -v -keystore "%USERPROFILE%\.android\debug.keystore" -alias
   androiddebugkey -storepass android -keypass android
   ```

2. > Project Overview ke paas ⚙ (gear) > **Project settings** > General > neeche "Your apps" > **Android icon** > Package name: **com.taskkamao.app** > Nickname: TaskKamao > Debug SHA-1 paste > **Register app** > **Download google-services.json**.

3. File ko yahan rakhein: `app\android\app\google-services.json` (baaki Firebase steps "Next" karke skip kar sakte hain — code mein pehle se hai).
4. Usi page par app ke neeche **Add fingerprint** se SHA-256 bhi daalein. Release keystore banane ke baad (Section 8) uska SHA-1/SHA-256 bhi daalna, aur Play Console > Test and release > Setup > **App signing** wale "App signing key certificate" ke SHA-1/SHA-256 bhi. **Yeh na kiya to Play Store wale app mein OTP nahi aayega.**

3.6 Web app config (admin panel ke liye)

> Project settings > General > Your apps > **Add app** > Web (**</>**) > Nickname: TaskKamao Admin > Register > jo `firebaseConfig = {...}` dikhe use copy karein.

`admin\index.html` kholein, `const firebaseConfig = { apiKey: "TODO", ...}` waali jagah apni values paste karein. (Yeh web keys secret nahi hain; security rules aur admin claim se hoti hai.)

3.7 Service account key (seed aur admin script ke liye)

> Project settings > **Service accounts** > Firebase Admin SDK > **Generate new private key** > Generate key.

Downloaded JSON ko `functions\serviceAccount.json` naam se save karein. **Yeh file kisi ko na bhejein, GitHub par na daalein.**

4. Code mein apni details daalna (TODO list)

File	Kya badalna hai
`.firebaserc`	Firebase project ID
`admin/index.html`	firebaseConfig (Section 3.6)
`app/android/app/google-services.json`	Nayi file rakhni hai (Section 3.5)
`app/android/app/src/main/AndroidManifest.xml`	AdMob **App ID** (abhi Google ka TEST id hai) — Section 6
`app/lib/core/app_config.dart`	Rewarded **ad unit id** (abhi TEST), Privacy/Terms/Delete-account URLs, support email
`docs/PRIVACY_POLICY.md`, `docs/TERMS.md`	Saare [PLACEHOLDER] bharein, website par daalein

5. Backend deploy karna (Functions + Rules)

CMD project folder (`C:\projects\taskkamao`) mein:

```
firebase use --add                (apna project chunein, alias: default)
cd functions
npm install
cd ..
```

5.1 Secrets daalna (RazorpayX keys yahan jaati hain — code mein nahi)

Pehle RazorpayX ki **Test mode** keys use karein (Section 7). Har command par value paste karke Enter:

```
firebase functions:secrets:set RAZORPAYX_KEY_ID
firebase functions:secrets:set RAZORPAYX_KEY_SECRET
firebase functions:secrets:set RAZORPAYX_WEBHOOK_SECRET
firebase functions:secrets:set OFFERWALL_SECRET
```

WEBHOOK_SECRET aur OFFERWALL_SECRET aap khud koi lamba random password bana sakte hain (20+ characters). Webhook wala RazorpayX dashboard mein bhi same daalna hai.

5.2 Deploy

```
firebase deploy --only firestore:rules,firestore:indexes
firebase deploy --only functions
```

Pehli baar **RAZORPAYX_ACCOUNT_NUMBER** poochega — RazorpayX dashboard se apna account number daalein (abhi na ho to test account number). Indexes banne mein 5–10 minute lag sakte hain.

> Deploy ke baad: Firebase Console > Build > **Functions** — list mein `verifyRewardedAd`, `razorpayWebhook`, `offerwallPostback` ke URL dikhenge (jaise https://asia-south1-PROJECT.cloudfunctions.net/verifyRewardedAd). Inhe note karein.

5.3 Tasks, quiz aur config daalna (seed) + admin banana

```
cd functions
set GOOGLE_APPLICATION_CREDENTIALS=serviceAccount.json
npm run seed
```

> Firebase Console > Authentication > **Users** > Add user > apna admin email + strong password.

```
node scripts/setAdmin.js aapka-admin@email.com
cd ..
firebase deploy --only hosting
```

Ab **https://PROJECT-ID.web.app** kholkar admin email/password se login karein. Yahan se: pending withdrawals, KYC verify, users block/unblock, tasks aur quiz add, config badalna.

6. Google AdMob setup

1. > admob.google.com > Sign up (business Gmail) > country India, payment details.
2. > Apps > **Add app** > Android > "Is the app listed on a supported app store?" > **No** (abhi) > App name: TaskKamao > Add app.

   App ID (`ca-app-pub-XXXX~YYYY`) copy karke `AndroidManifest.xml` mein TEST id ki jagah daalein.
3. > App > **Ad units** > Add ad unit > **Rewarded** > Name: video_task > Reward amount: 5, Reward item: points > **Server-side verification**: callback URL mein `verifyRewardedAd` ka URL > Create ad unit.

   Ad unit ID (`ca-app-pub-XXXX/ZZZZ`) ko `app_config.dart` ke `rewardedAdUnitId` mein daalein.
4. Development ke time apne phone ko **test device** banayein (AdMob > Settings > Test devices) — apne hi ads par click karna AdMob account ban karwa sakta hai.
5. App Play Store par aane ke baad: AdMob > App settings > **Link to app store**, aur website par **app-ads.txt** lagayein (AdMob batata hai kya likhna hai).

> Rewarded ad tabhi dikhna chahiye jab user khud button dabaye, aur pehle saaf likha ho ki kya milega ("+5 pts"). App mein yeh pehle se aisa hi bana hai. "Ad dekh kar humari madad karein" jaisa text na likhein.

7. RazorpayX (UPI payout) setup

1. > x.razorpay.com > Sign up > business type chunein > business PAN, GST (agar hai), bank account, address > documents upload > KYC/verification ka intezaar.

2. Current account khulwane / activate hone ke baad usme funds daalein (payout isi balance se jaata hai).
3. > Dashboard > **Account & Settings** (ya Settings) > **API Keys** > Generate Key > Key ID + Key Secret copy (secret dobara nahi dikhega).

   Inhe Section 5.1 wale commands se secrets mein daalein. Shuru mein **Test Mode** keys.
4. > Settings > **Webhooks** > Add New Webhook > URL: `razorpayWebhook` ka URL > Secret: wahi jo RAZORPAYX_WEBHOOK_SECRET mein daala > Events: **payout.processed, payout.failed, payout.reversed, payout.rejected, payout.updated** > Save.
5. Account number (dashboard par dikhta hai) deploy ke time RAZORPAYX_ACCOUNT_NUMBER mein jaata hai.
6. Test mode mein poora flow chalayein (Section 10). Sab sahi ho tab Live keys se secrets update karein:

```
firebase functions:secrets:set RAZORPAYX_KEY_ID      (live key)
firebase functions:secrets:set RAZORPAYX_KEY_SECRET  (live secret)
firebase deploy --only functions
```

> Business registration/GST nahi hai to RazorpayX ya Cashfree approval mushkil ho sakta hai. Pehle proprietorship + Udyam/GST ke baare mein apne CA se baat karein. Bina payout partner ke withdrawal feature live na karein — admin panel > Config mein `"payoutsEnabled": false` rakh sakte hain.

8. App chalana aur Release build (AAB) banana

8.1 Phone par test

Phone mein: Settings > About phone > Build number par 7 baar tap (Developer options) > Developer options > **USB debugging** ON. USB se PC se jodein.

```
cd app
flutter pub get
flutter run
```

8.2 Upload keystore (sirf ek baar — file aur password sambhal kar rakhein)

```
cd app\android\app
keytool -genkey -v -keystore upload-keystore.jks -keyalg RSA -keysize 2048 -validity 10000
-alias upload
```

"keytool not found" aaye to Android Studio ke andar wala use karein: `"C:\Program Files\Android\Android Studio\jbr\bin\keytool"`

`app\android\key.properties.example` ko copy karke `app\android\key.properties` banayein aur passwords bharein (storeFile=upload-keystore.jks).

8.3 Build

```
cd app
flutter build appbundle --release
```

Output: `app\build\app\outputs\bundle\release\app-release.aab` — yahi Play Console par upload hoti hai. (Side-testing ke liye `flutter build apk --release`.)

Har naye version se pehle `app/pubspec.yaml` mein `version: 1.0.0+1` ka aakhri number badhayein (1.0.1+2, ...).

9. Play Store listing — kya-kya chahiye

9.1 App banana

> play.google.com/console > **Create app** > App name: TaskKamao > Language: English (India) / Hindi > **App** (Game nahi) > **Free** > declarations tick > Create app.

Category "Game" na chunein — Play ki loyalty-program policy game apps mein chance-based rewards (spin/scratch) allow nahi karti. Non-game category (jaise Entertainment/Lifestyle) chunein.

9.2 App content (Policy > App content) — sab bharna zaroori

Section	Kya bharein
Privacy policy	Aapki website par hosted Privacy Policy ka URL
App access	"All or some functionality is restricted" > test phone number + OTP (Section 3.3) aur steps likhein
Ads	**Yes, my app contains ads**
Content rating	Questionnaire sach-sach bharein (category: Utility/Other — rewards, no gambling with money)
Target audience	**18 and over** only
Data safety	Neeche wali table dekhein
Advertising ID	Yes — ads (AdMob) ke liye use hota hai
Financial features	Declaration sach-sach bharein: app loan, deposit, wallet ya investment nahi deta; sirf kamaye hue rewards ka UPI payout karta hai. Koi option clear na ho to Play support se poochhein.
Account deletion	In-app path (Profile > Account delete karein) + web URL jahan deletion request kar sakein
Government app / News / Health	No

9.3 Data safety form — kya declare karna hai

Data type	Collected?	Purpose
Personal info: Name, Phone number	Yes (required)	Account management, Fraud prevention
Personal info: Other info (PAN)	Yes (optional — sirf withdrawal ke liye)	Fraud prevention, Compliance
Financial info: Other (UPI ID)	Yes (optional)	App functionality (payout)
App activity: In-app actions	Yes	App functionality, Fraud prevention
Device or other IDs	Yes	Advertising, Fraud prevention/ security
Shared with third parties	Yes: ad network (AdMob – device ID), payout partner (name, phone, UPI ID for payout)	
Encrypted in transit	Yes	
Users can request deletion	Yes	

Agar Crashlytics/Analytics jodte hain to unka data bhi declare karein. SDKs ke latest "data safety" guides (Firebase, AdMob) ek baar zaroor milaa lein.

9.4 Store listing text — kya likhein, kya nahi

> **Achha (allowed):** "TaskKamao ek rewards app hai. Daily check-in, quiz, spin aur partner offers poore karke coins kamaayein. 100 coins = ₹1, minimum withdrawal ₹50 (KYC ke baad UPI par). Rewards tasks aur offers ki availability par nirbhar hain."

> **Mat likho:** "Roz ₹500 kamao", "Guaranteed income", "Ghar baithe salary", "Sote-sote kamai", "Paytm cash instantly", "Best earning app No.1", jhoothe payment-proof screenshots, kisi famous app/brand ka logo.

Zaroori assets: app icon 512×512 (project mein `docs/play_store_icon_512.png`), feature graphic 1024×500, kam se kam 2 phone screenshots (asli app ke), short description (80 characters), full description.

9.5 Testing track se release tak

> Test and release > Testing > **Closed testing** > Create track > Create new release > app-release.aab upload > release notes > Save > Review > Start rollout. Testers (Gmail list) add karein.

Personal account par: required testers (abhi 12) ko 14 din lagatar opted-in rakhein, phir **Apply for production**. Review mein kuch din lag sakte hain.

10. Testing checklist (launch se pehle sab tick karein)

- ☐ Naye number se OTP login hota hai; galat OTP par error aata hai

☐ Signup par referral code daalne se friend ki list mein "Pending" dikhta hai; galat code par "bina referral aage badho" option aata hai

☐ Usi phone par doosre number se login karne par "ek device par ek account" error aata hai

☐ Daily check-in ek hi baar hota hai; agle din streak +1; ek din chhodne par streak 1 se shuru

☐ Quiz: sahi jawab par coins, galat par 0; wahi sawal dobara nahi aata; daily limit ke baad roka jata hai

☐ Spin 1/din, scratch 3/din; limit ke baad error

☐ Video (test ad): poora dekhne par "video points" aate hain; beech mein band karne par kuch nahi; withdraw balance nahi badhta

☐ Firestore console mein app se balance badalne ki koshish (ya rules playground) — **deny** honi chahiye

☐ KYC submit > admin panel mein dikhe > Verify > app mein Verified

☐ Same PAN doosre account se — error

☐ ₹50 se kam withdrawal blocked; UPI galat format blocked; ek pending ke rehte doosra blocked

☐ Withdrawal request par balance turant ghatta hai ("Withdrawal mein" dikhta hai)

☐ Admin Reject > coins wapas + "Refund" history mein

☐ Admin Approve (RazorpayX TEST mode) > webhook se status "paid"; test failure par coins refund

☐ Friend 2,000 task coins tak pahunche > referrer +1,000, friend +500; uske baad 10% commission dikhe

☐ Dark mode, FAQ, Privacy/Terms links khulte hain; Logout; Account delete request

☐ Release AAB par OTP chalta hai (release + Play signing SHA keys Firebase mein daali hain)

☐ Firebase Console > Functions > Logs mein koi laal (error) entry nahi

☐ App Check (Play Integrity) register karke `ENFORCE_APP_CHECK = true` karke functions dobara deploy

11. Andazan kharcha (approximate — current rates website par check karein)

Item	Kharcha
Google Play Console	$25 ek baar (~₹2,100–2,200)
Firebase Blaze — Functions, Firestore, Hosting	Chhote app par aksar free quota ke andar ya kuch sau rupaye/mahina; users badhne par badhta hai. Budget alert zaroor.
Phone OTP SMS (Firebase)	Per SMS charge; India ke liye kai sources ~$0.01/SMS batate hain (Google Cloud Identity Platform pricing page par current rate dekhein). 1,000 logins ≈ ₹850 ke aas-paas.
RazorpayX payout fee	Published: UPI ₹1,000 se kam par ₹4 + 18% GST ≈ ₹4.72 per payout. ₹50 ke payout par yeh ~9% hai — isliye minimum ₹50 se kam na karein. Current account ki minimum balance shart alag.
Users ko diye rewards	Sabse bada kharcha. Ise ad + offer kamai se kam rakhna hi business hai. Config se coins/limits kam-zyada kar sakte hain.
Domain (optional)	~₹500–1,000/saal
CA / legal salah	Aapke CA par nirbhar
Developer (agar hire karein)	Experience aur kaam ke hisaab se alag-alag

> **Seedha hisaab:** Har mahine admin panel mein dekhein — kul payout (withdrawals) + fees vs. AdMob + offerwall kamai. Payout kamai se zyada ho to coins kam karein ya limits ghataayein. Kisi bhi user ko kamai ka vaada na karein.

12. Aam problems aur hal

Problem	Hal
OTP nahi aata / "app not authorized"	Firebase mein SHA-1 + SHA-256 (debug, release, Play app signing — teeno) daalein; nayi google-services.json download karke rakhein
"The query requires an index"	`firebase deploy --only firestore:indexes` chalayein aur 10 min rukein
"PERMISSION_DENIED" app mein	Rules deploy hue? `firebase deploy --only firestore:rules`
Functions deploy fail: billing	Blaze plan active karein
Video "available nahi"	Naye AdMob account/ad unit par ads aane mein samay lagta hai; test ads se check karein; internet
Video dekha par points nahi aaye	AdMob ad unit mein SSV callback URL sahi hai? Functions logs mein `verifyRewardedAd` dekhein
Payout "processing" mein atka	RazorpayX webhook URL/secret/events check karein; RazorpayX dashboard mein payout status dekhein
Admin panel: "not an admin"	`node scripts/setAdmin.js email` chalayein, phir logout/login
Gradle/Kotlin build error	Android Studio updated rakhein; `flutter clean` phir `flutter pub get`; error message developer ko bhejein

13. Aage ke liye (optional)

- Offerwall jodna: India support wala provider chunein, unka SDK lagayein, postback URL = `offerwallPostback`, aur `functions/src/offerwall.ts` unke format ke hisaab se badlein. Phir admin > Tasks > offerwall active = true.
- Automatic PAN verification API (manual KYC ki jagah).
- Weekly leaderboard reset, push notifications, Crashlytics.

Yeh guide technical setup ke liye hai; yeh legal ya tax salah nahi hai. Google, Razorpay aur Firebase ki policies aur prices badalti rehti hain — final faisle se pehle unki official websites check karein.
